NEXTGEN 2026 FINALIST · NATIONAL SHOWCASE ON-DEVICE AI ADAPTIVE TRAFFIC SIGNAL CONTROL

THEIATRON

TRAFFIC LIGHTS THAT SEE.

US$100,000

PRE-SEED INVESTMENT OPPORTUNITY

A camera and an edge computer give green time to the road that needs it — without cloud connectivity or a new traffic-control network. Omu Inetimi · Founder

01 FIXED TIMERS CANNOT SEE THE QUEUE IN FRONT OF THEM

Traffic demand changes minute by minute, but most signals repeat fixed schedules — busy roads wait while empty roads get green, wasting time, fuel and road capacity.

Affects commuters, commercial drivers, public transport, emergency services and road agencies.

02 ORDINARY FOOTAGE IN · ADAPTIVE DECISIONS OUT

SEE	Detects and tracks all vehicle types.
UNDERSTAND	Turns movement into live demand per approach.
DECIDE	Green follows queue pressure, behind safety safeguards.

ON-DEVICE | SELF-CALIBRATING | RETROFIT PATH | PI-CLASS HARDWARE

WORKING PROTOTYPE DETECTING AND TRACKING VEHICLES ON PREVIOUSLY UNSEEN LOCAL FOOTAGE

03 EVIDENCE MODELED · PROTOTYPE SIMULATION

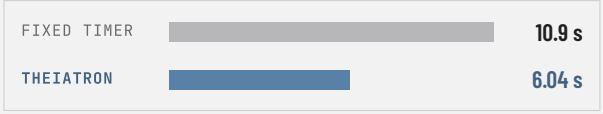

45%

lower **modeled** average waiting

51% lower modeled p95 · 40 real vehicles, 180 s

04 TRACTION

- NextGen 2026 finalist
- End-to-end working prototype
- Auto-learns approaches from footage
- One-click workflow · 3D digital twin
- Pre-revenue; no deployments yet

Real-video vehicle demand; simulated point-queue signal service; identical arrivals for both controllers. Prototype simulation evidence, not measured roadside delay.

05 MARKET · NIGERIA FIRST, THEN WEST AFRICA

State/city governments, road agencies, toll operators, estates, campuses, ports. Pilots → corridors → multiple cities.

06 THREE WAYS TO EARN PER INTERSECTION

1. Hardware + installation.
2. Annual software + support licence.
3. Corridor analytics subscription.

07 INVESTMENT OPPORTUNITY

CAPITAL + A PILOT PARTNER

Seeking **US$100,000 pre-seed** plus a state, road-agency, estate, campus, or industrial-site partner for three supervised pilot junctions.

40% PILOT HARDWARE + INSTALLATION

30% REALTIME PI ENGINEERING + QUEUE MEASUREMENT

15% SAFE CONTROLLER INTEGRATION + REGULATORY

15% FIELD OPS, MONITORING + INDEPENDENT EVALUATION

2026–27 · FIELD VALIDATION

Realtime edge unit, pilot partner, three supervised junctions, measured results.

2028 · COMMERCIAL LAUNCH

Pilots become paid per-intersection deployments; corridor coordination begins.

2029–30 · REGIONAL SCALE

Multiple Nigerian cities and selected West African markets via partners.

Less waiting. Less fuel wasted at idle. More useful capacity from roads cities already own.
