THEIATRON

Traffic lights that **see**. On-device AI signal control — **no internet required**.

FINALIST · NEXTGEN 2026

theiatron.vercel.app

01 THE PROBLEM

EVERY JUNCTION · EVERY DAY

Traffic lights run on timers set once — **blind** to the queues in front of them. Adaptive systems exist, but at tens of thousands of dollars per junction, **most African cities will never deploy them.**

- Hours lost weekly per commuter
- Fuel burned & emissions at idle
- Legacy fix unaffordable at scale

02 THE SOLUTION

A CAMERA + A 6 MB BRAIN, ON THE POLE

IT SEES

Detects & tracks every vehicle, 10× per second.

IT MODELS

Queue demand & waiting under each signal plan.

IT DECIDES

Green goes where it's needed — behind hard safety interlocks.

SELF-CALIBRATING — learns a new intersection in 3 min

FULLY OFFLINE

RETROFIT, NOT REBUILD

TIMER FALLBACK PLANNED FOR PILOT

FRACTION OF LEGACY COST

03 EVIDENCE

REAL-VIDEO DEMAND · MODELED QUEUES

–45%	–51%	2.9×
AVERAGE WAIT	MODELED P95 WAIT	REAL-TIME ON CPU

Average wait per vehicle — 40 real vehicles, identical demand for both controllers, replayable from recorded data.

04 MARKET

NIGERIA FIRST · THEN WEST AFRICA

WHO BUYS
State & city governments, road agencies, toll & estate operators.

THE GAP
Thousands of junctions where legacy adaptive systems are unaffordable.

THE PRIZE
A multi-billion-dollar global adaptive-traffic market, growing with urbanisation.

05 TRACTION

PRE-REVENUE · PROTOTYPE VALIDATED

✓ National finalist
NextGen 2026 → London Grand Finale

✓ Working prototype
–45% modeled wait on one clip

✓ Self-calibration
Learns intersections by watching

✓ Public demo
theiatron.vercel.app + 3D twin

Honestly stated: no revenue or deployments yet — the first field pilot is exactly what this raise funds.

06 REVENUE MODEL

HARDWARE
Per-intersection unit sale — camera + edge controller, retrofit install.

LICENCE
Annual per-intersection software licence & safety monitoring.

INSIGHTS
City analytics subscription from the same cameras.

07 THE ASK

US$100,000
PRE-SEED

- 40% pilot: 3 live intersections
- 30% engineering
- 15% regulatory
- 15% operations

08 GROWTH PLAN

2026
London finale · field unit on Raspberry Pi 5 · local footage pilots.

2027
First live pilot — 3 intersections with a state partner; published results.

2028
First commercial deployments, 25+ junctions · corridor "green waves".

2029–30
500+ junctions multi-city · West-Africa expansion · analytics platform.
